

GREENTRIPPER

GIVE BACK TO NATURE

Greentripper is a small Belgian impact-driven company that focuses specifically on climate issues related to travel.

What do we do? We calculate the carbon footprint of travel, compare it, reduce it, contribute to climate initiatives for the unavoidable emissions, and inspire more sustainable, regenerative tourism.

Travelling enriches our lives, takes us to breathtaking destinations, allows us to discover new cultures, and creates unforgettable memories. However, travel also has an impact on the climate. Paradoxically, the very places we love to visit and the local communities that depend on tourism are the ones most threatened by climate change.

Whether for leisure or business, Greentripper helps travellers, tourism professionals, and organisations for whom travel is key, to take action on their carbon footprint. With our digital tools and consultancy services, you can assess the CO₂e impact of your travels and receive concrete actions to reduce it. For unavoidable emissions, you can support certified climate projects that reduce, avoid, or remove an equivalent amount of greenhouse gases. In doing so, we reduce tourism's environmental impact while supporting the communities most vulnerable to climate change.

The climate projects supported meet the highest international standards (e.g., the Gold Standard label). They go beyond simply reducing CO₂e emissions – they enhance biodiversity, stimulate local economies, and promote social development. These projects contribute to at least three United Nations Sustainable Development Goals (SDGs). Every contribution is backed by a certificate, guaranteeing that each tonne of CO₂e funded has been genuinely reduced, absorbed, or avoided.

Climate action doesn't stop at CO₂e emissions! That's why Greentripper also collaborates with initiatives such as GoodPlanet Belgium and River Cleanup. By investing in broader sustainability initiatives, such as education and river clean-ups, we go even further in protecting our planet.
